What We Do!

We collect non-GMO vegetable seeds in Toronto, dry and package them and:

We send the vegetable seeds to the people of Zambia, Africa.

Who in exchange gather tree seeds for our tree nursery, which we plant in communities and will also sell to National & Private Game Parks to plant to feed Elephants through our Echo-tourism tree planting projects.

We are at present sending seeds to connections in four cities in Zambia and have established relationships with governments and other echo-tourism establishments to provide trees to them.

Your contribution is helping SEEDS to operate a seed bank to help the needy become self-supporting in Zambia Africa. By providing the vegetable seeds, people are able to plant, grow, eat and save their own seed. They may sell the fruits of their labours or eat a healthier diet themselves.

It is through donations such as yours that SEEDS has assembled a team in Canada and Zambia whose sole vision is to protect the environment for the benefit of the public by conserving ecosystems or restoring ecosystems and bio-diversity on a long-term basis.

You are helping to raise funds, which help these programs immediately as we send vegetable seeds every two months. We provide "How to Grow" handouts for all of the seeds, both the seeds we send and the tree seeds they provide. It is our goal to grow trees for, food, shade, fuel, fertilizer and erosion control of the soil. "How to make a compost pit" is also most important to replenish the soil.

Thus providing all the many benefits of trees and food to the marginalized peoples and elephants of Zambia.

Thank you for your support!
